# Automation

## ABSOLIFT 1000 ABSOLIFT 600

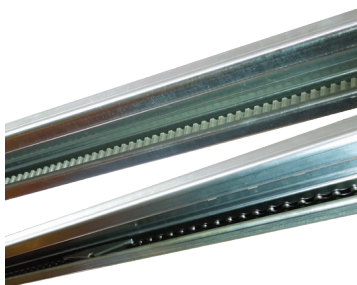

An automated garage door is no longer a luxury, but a necessity from a security point of view. It is imperative to ensure that the motor of choice is fitted with a safety mechanism, (if an obstacle is encountered i.e. a child, a dog, or your car, the motor automatically stops and reverses, preventing injury or damage to property.)

Always make sure that the installer is well-qualified and is employed by a reputable garage door specialist. Adjusting and balancing a garage door to ensure smooth and safe operation is vitally important to the lifespan of the motor, as well as the safety of the household. South Africa has a large variety of automations available.

**Absolift®** motors offers an optional battery backup which is strong enough to work for up to 25 cycles. We believe this to be a necessity with the frequent power outages we experience in South Africa.

### Some of the Absolift® features:

1. 1000 N/m strength (one of the strongest in SA)
2. Slow start / stop function (for noise reduction)
3. Rechargeable battery back-up, 24 Volt, 2,4AH
4. 4 Button remotes
5. Code hopping receiver
6. Easy functioning program facility
7. Courtesy light, 3 minutes
8. Chain or Belt driven motors (belt being much quieter)

# Hardware

Our sister company, **Absolute Hardware**, specializes in the import of garage door hardware. All our garage door components are manufactured from 2mm gauge galvanized steel. High quality hardware is essential for the smooth operation of your garage door.

## Hardware used:

- 2mm Galvanised PRE-ASSEMBLED tracks, for faster installation. Horizontal and Vertical tracks will not bow or flex.
- Boxed kits include ALL hinges, screws, nail-in-anchors, coach screws, plugs and inside locks.
- Single kits include 2 x 65kg tension springs.
- Double kits include 2 x 80kg torsion springs, 4 unique galvanised top hats for added strength and torsion pole.
- All hinges are 2mm galvanised steel for added strength.
- 2.5mm Safety cable included.
- 7 Link adjustment chain included for extra balancing on tension spring.
- All bearings are extra heavy duty.
- Clevis pulley of heavy duty construction.
- 50mm x 50mm Galvanised perforated angle for added strength.
- 3mm Lifting cable suitable for all doors.
- Cable drums are heavy duty.
- 20mm x 6mm Galvanised door / motor-track linking arm for added strength.
- 50, 55, 60, 65, 70, 80 and 85kg Tension springs available.
- 40, 50, 60, 70, 80, 90 and 100kg Torsion springs available.
- All caravan hardware available.
- With all this, you can be assured of a quality hardware kit that will last you years.

## MAINTENANCE - SERVICE & REPAIR

Your garage door is the biggest moving object in your home. We recommend that our clients book a service once every 18 months to 2 years to ensure the continued smooth operation of your garage door and motor. **Absolute Group** has 3 fully equipped maintenance teams to cover the whole Gauteng area. All our installers and maintenance personnel have many years of experience behind them. We also have a full complement of hardware, motors and oils on site to ensure the speedy supply of necessary items to keep your door in working order. Be assured that should there be a problem on your garage door **Absolute Doors** will make every effort to reach you as soon as is possible as we understand the security risk involved when a garage door is not properly operational.
