Automation

An automated garage door is no longer a luxury, but a necessity from a security point of view. It is imperative to ensure that the motor of choice is fitted with a safety mechanism, (if an obstacle is encountered i.e your child, a dog or a car, the motor automatically stops and reverses, preventing or damage to your car)

Always make sure that the installer is qualified and employed by a reputable garage door specialist. Adjusting and balancing a garage door to ensure smooth and safe operation is vitally important to the lifespan of the motor, as well as

the safety of the household. South Africa has a wide variety of automations available.

Our motors offer an optional battery back up system which is strong enough to work up to 25 cycles, we believe this to be a necessity for the frequent power outages we experience in South Africa.

Some of the features:

1. 1000 N/m strength (one of the strongest in South Africa)
2. Slow start/Stop function for noise reduction
3. Re-chargeable battery back-up, 24 volt, 2,4AH
4. 4 Button remotes
5. Code hopping receiver
6. Easy function programming facility
7. Courtesy light
8. Chain or belt driven motors
